

Updating Your Med Admin Training System?

6 *CRITICAL*
Questions to Ask

CHOOSING *YOUR* SOLUTION

As nursing programs look for training systems to teach safe medication administration, it's essential to choose the right one to meet the critical elements of med pass, cover all aspects of the process, and integrate seamlessly from med room to bedside. This guide highlights **6 key criteria to consider** before making a purchasing decision.

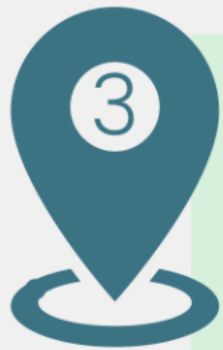

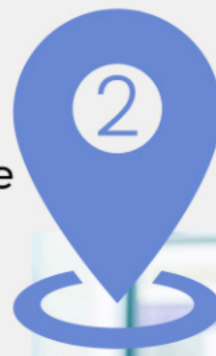

Is it Comprehensive?

- Does the training system cover all critical elements?
- Is there a medication dispensing unit as part of the system? Or, is it necessary to piece together multiple products?
- Are medications part of the purchase, will they need to be purchased separately, do you need to create barcodes and apply them to the "medications"?
- Is there REAL integrated barcode scanning of meds and patient ID band at the bedside?
- Is there electronic documentation for the students to practice?

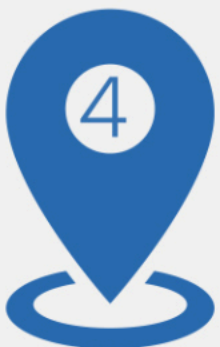

How Complex is it?

- What is the setup process? Does it require you to allocate spaces in the dispensing unit for the meds and assign each medication a barcode BEFORE you can add patients and orders?
- Does entering patients and orders require additional software?
- What is involved in ongoing restock/maintenance? Are software inventory resets and reordering or labeling consumable meds required between uses?

What are ALL the Costs?

- What is the initial cost, installation cost, and onboarding cost?
- What are the ongoing costs for students and the facility, including support fees and consumables purchases?
- Is there an annual license? What is covered? Are software updates part of this?

What's My Time Commitment?

- How long does set up take?
- Is entering individual user IDs required? If so, how is that done?
- How long does restock take?

Can I Customize?

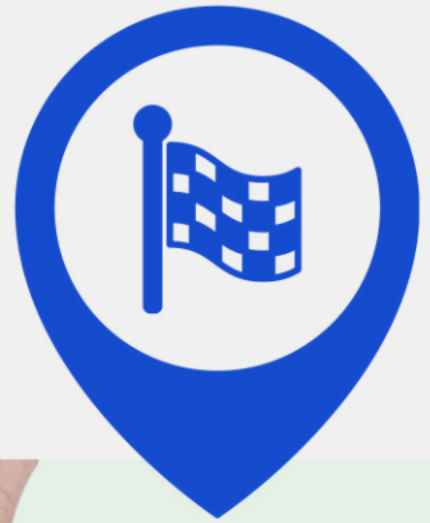

- Are preloaded patients and meds available?
- Can you edit or add either? If so, what is involved?

What are the IT Constraints?

- What are the IT requirements? Are firewall access, Wi-Fi, and software configurations/ programming needed to operate?
- What is the impact on FERPA?
- Do you have to set up and delete individual user accounts upon graduation?
- How is the software updated?

Use this guide to help make the right choice for your nursing program. You can find the medication administration training system that fits your needs AND your resources.
